Course: BSc(Hons) Applied Software Development (UI310)
Module: Applied Research

This module aims to provide an opportunity to research into a topic that interests you. As part of the large software challenge you might be applying a range of different development tools and techniques. This module offers you the chance to dig deeper and become more specialised in your understanding of a topic. In this module you will learn how to use scientific journals to investigate the start of the art, develop critical thinking skills to write a literature review, position your application of the technique in terms of current market trends.

This module will also be taught in as a team endeavour; the teams may differ from those of the large project and will be grouped by topic of interest. Teams can decide how they wish to present the information. The final output of this module might be a video, an info animation, a presentation or a whitepaper.
