| Course: BSc(Hons) Applied Software Development (UI310) |
| Module: Creativity Through Patterns |

This module follows on from the Principles of Programming and focuses on developing similar skills. The focus for this module is creating maintainable code using common patterns of code. These patterns will help you build more complex applications. This module also develops the project management process and explores security from a business point of view. Developing your team skills will continue, broadening your communication skills based on the audience and expected tone.
