Course: BSc(Hons) Applied Software Development (UI310)
Module: Multiplatform Development

This module builds on the skills learned in the first year with students developing projects on a variety of platforms including Desktop, Mobile, and the Cloud. Students will explore different project management techniques and the types of software they benefit. They will also learn how to evaluate their own performance within the team. This module provides students with the skills to identify and correct a range of common software vulnerabilities.
