Course: BSc(Hons) Applied Software Development (UI310)
Module: Software Release Management

This module aims to provide students with the knowledge to release applications successfully into a range of software ecosystems. Students will learn about managing their relationships within a larger organisation and to present a compelling case to gain commitment from others. This module will introduce students to topics like Intellectual Property and anti-piracy techniques that will enable them to build a successful software product. You will also learn about the process for releasing products into a variety of software ecosystems.
